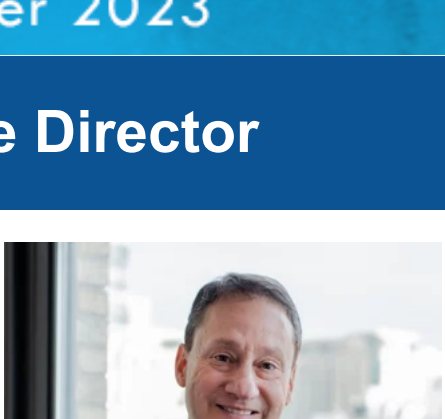
Tufts Center for the Study of Drug Development
TUFTS CSDD INSIDER
November 2023

From the Executive Director



Dear CSDD Friends:

Current global economic conditions are contributing to an already intense drug development operating environment. Reports of cost cutting measures, downsizings, reorganizations and delayed decisions and activities are common across the clinical research enterprise. We are also seeing high and rising demand for evidence to guide optimization strategies.

To that end, this past month Tufts CSDD launched several new studies assessing patient participation burden and investigative site participation burden based on protocol design characteristics. We have also initiated a new working group study gathering use cases of AI-enabled drug development activity with the aim of quantifying return on investment.

The CSDD team has been collecting and analyzing data for several studies underway. Our PALADIN consortium — a uniquely positioned pre-competitive group of 25 organizations dedicated to improving industry and patient advocacy group collaborative effectiveness — has been wrapping up Year One activities as it moves into Year Two. A second pre-competitive consortium managed by Tufts CSDD has initiated the collection of hard evidence characterizing the impact of decentralized clinical trial components on clinical trial performance and quality.

We have also been actively planning our 2024 Post-Graduate Course in Clinical Pharmacology, Drug Development and Regulation. Now celebrating its 51st anniversary, this internationally recognized program will be offered online throughout the month of February. The program is designed to provide mid- and senior level R&D professionals with a comprehensive understanding of the drug development process, from initial discovery through to regulatory approval and post-marketing activity. If you are new to the drug development industry; have limited understanding of the role that certain functional areas play in drug development; have little to no experience leading diverse collaborative teams and using new and potentially disruptive technologies and solutions - then this course is ideal for you.

This *Insider* provides additional information about the upcoming 2024 Post Graduate Course. You can also contact **Sarah Wrobel** or visit our **website** to learn more.

As always — I look forward to hearing from you, to seeing you at upcoming conferences and meetings, and to welcoming you to our working group studies, roundtables and professional development courses. Please **contact me** directly for information about any of our ongoing and upcoming activities.

Wishing you the very best,

Ken

Professional Development Courses

This winter, Tufts CSDD will host the 51st annual **Postgraduate Course in Clinical Pharmacology, Drug Development, & Regulation.** This course is designed to provide participants with a comprehensive understanding of the drug development process, from initial discovery through to regulatory approval and post-marketing surveillance. Whether you are new to the industry or need a refresher, the program will provide you with instruction in practical and technical problem-solving in the areas of clinical pharmacology, drug development & clinical trial strategies, biopharmaceutical development, drug safety, and new drug regulation.

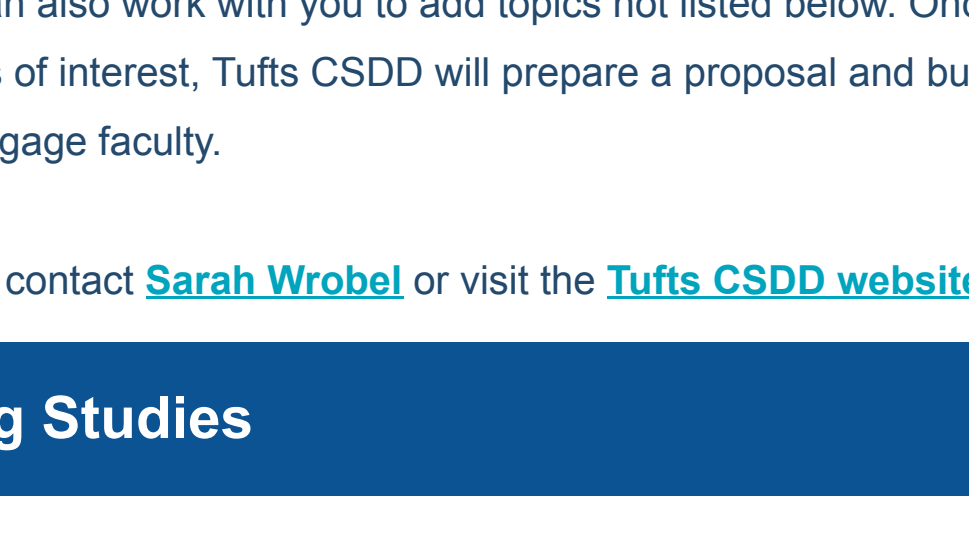
To review the program agenda and register for the program, contact **Sarah Wrobel** or visit the **Tufts CSDD website**

Tufts CSDD offers a variety of **Custom On-Site and Virtual Drug Development Training Courses** covering fundamental areas of drug development and regulatory science, and hot topics on issues, challenges, new practices, and solutions. Programs are customized to the specific needs of individual organizations. **This brochure** contains a list of topics from which to choose and design your program. Tufts CSDD can also work with you to add topics not listed below. Once you have selected topics of interest, Tufts CSDD will prepare a proposal and budget and will identify and engage faculty.

To learn more, contact **Sarah Wrobel** or visit the **Tufts CSDD website**

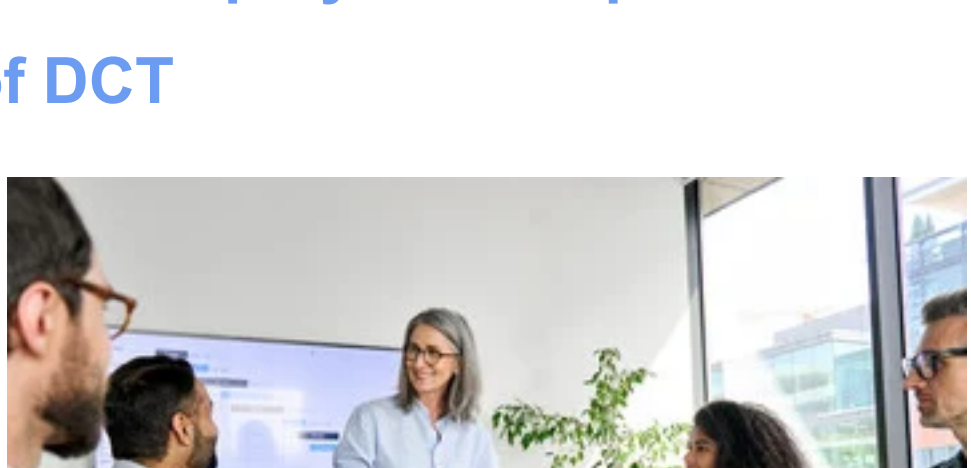
Upcoming Studies

Benchmarking AI use in Drug Development and Quantifying ROI



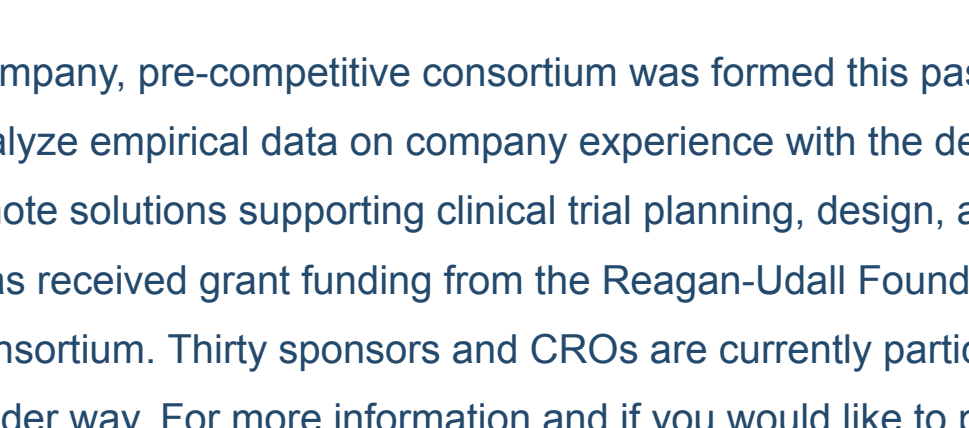
Tufts CSDD has launched a new multi-company study updating benchmarks on AI/Machine Learning use in clinical development planning, design, execution, reporting and oversight. Conducted in collaboration with the Drug Information Association, the study will look at drug development landscape practices, profile specific use cases, and quantify the return on AI investment in drug development. For more information, contact **Mary Jo Lamberti.**

New Consortium Launched to Gather Empirical Data on DCT Deployment Experience and the Impact of DCT



A new multi-company, pre-competitive consortium was formed this past June to gather and analyze empirical data on company experience with the deployment of virtual and remote solutions supporting clinical trial planning, design, and execution. Tufts CSDD has received grant funding from the Reagan-Udall Foundation to support the consortium. Thirty sponsors and CROs are currently participating. Data collection is under way. For more information and if you would like to participate, please contact **Ken Getz.**

Updating Benchmarks on the Vendor Qualification Process



Next month, Tufts CSDD will be launching a new working group study updating benchmarks on the vendor qualification assessment process and identifying improvement opportunities. Sponsors, CROs and other service providers dedicate substantial resources and time annually to support this process and to accommodate increasingly complex operating activity. For more information, contact **Zak Smith**

Research Highlights

Our Latest Impact Report

Number of Biotech Products in Late-Stage Clinical Trials has Quadrupled During the Past Decade

The November/December 2023 issue of the Tufts CSDD Impact Report Series (volume 25, number 6) is now available. This issue presents data characterizing dramatic growth and change in the biotech industry: with more than 430 companies now sponsoring clinical trial activity, 200+ recent mergers and acquisitions and global product sales reaching nearly $500 billion in 2022.

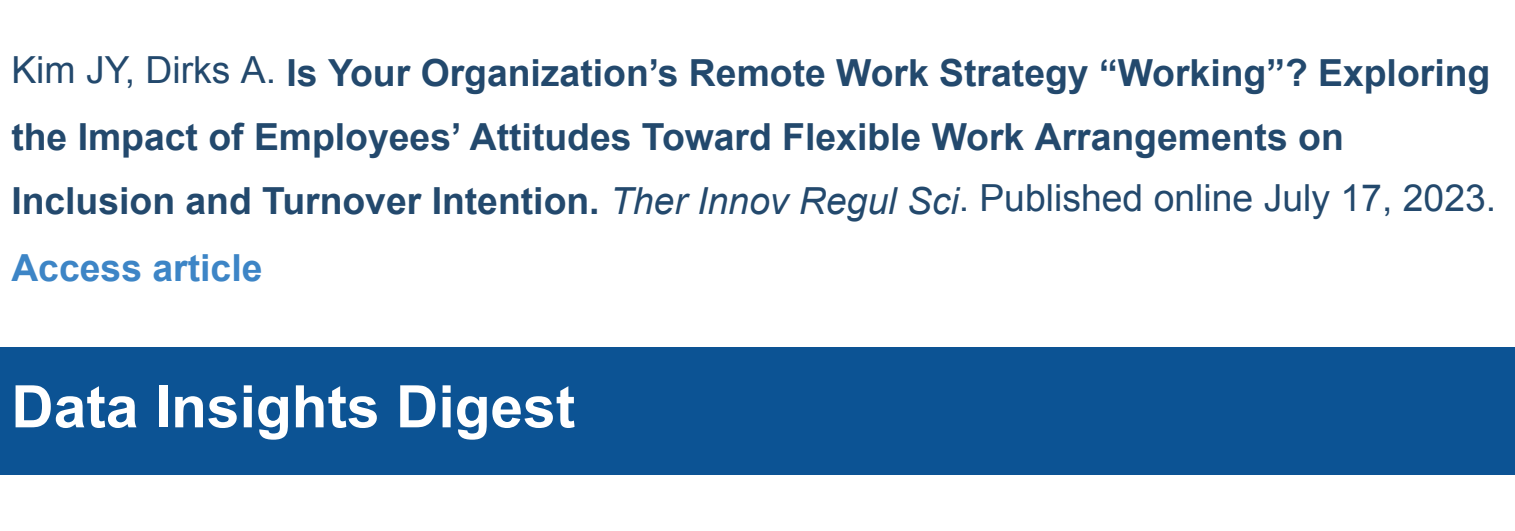
Data Insights Digest



Rising Prevalence and Frequency of Amendments

	2015 (N=836 protocols)		2021 (N=952 protocols)	
	Prevalence	Mean	Prevalence	Mean
Phase I	52%	1.8	67%	3.1
Phase II	77%	2.2	89%	3.3
Phase III	66%	2.3	82%	3.5

- The prevalence of at least one substantial amendment and the mean number of substantial amendments per protocol increased across all clinical phases since 2015
- Nearly nine-out-of-ten phase II protocols have substantial amendments with an average of 3.3 implemented per protocol
- Phase III protocols saw the highest increase in prevalence of amendments -- and phase I protocols saw the highest increase in mean number of amendments per protocol -- between 2015 and 2021
